

Makerspace Fraction Challenge

Project Self-Reflection

Student Name: Brendon M.

Project Name: The Candy Fraction Zone

1. What is the most important thing you learned in this project:

- I learned that fractions are more fun in games than being plain.
- I learned that fractions can be adventures.
- I learned that you can make fractions fun by adding fun story problems.
- I learned that it is more fun being content producers than content consumers.
- I learned that you can make lots of things with what some people call junk.

2. What do you wish you had spent more time on or done differently:

I think that we should have spent more time making more things like a kiss and a hug candy. I think it would be even more fun. I think we should add some mini games to go with the project.

3. What part of the project did you do your best work on:

I think the best thing I did was the building and the independent iMovie because most of the time people help me and this time nobody helped me except Jaren but Jaren helped me just a little bit.

4. What was the most enjoyable part of this project:

My favorite parts are the building, the iMovie creating, commercial shooting without reading from the script and the sharing your project with people or teaching them how to play it. I love making crafts with what most people call junk and I like using my imagination to build things.

5. What was the least enjoyable part of this project:

My least favorite parts are written Project Plan, written Project Proposal, project Poster and written Commercial Script.

6. How could you change this project to make it better next time:

Next time I think that we should spend more time making more things like a kiss and a hug candy. I think it would be even more fun next time to have more things. I think next time we should make our own independent project so that we don't get angry at someone because you want to do it your way.
