

# Makerspace Fraction Challenge

## Project Self-Reflection

\*\*\*\*\*

Student Name: **Elias John Caniglia** Project Name: **“The Generator”**

1. What is the most important thing you learned in this project:

- That fractions don't have to be used only in math.
- I learned that you don't have to throw away everything, you can just reuse it for something else .
- I learned a quote from Thomas: One man's trash is another man's treasure.
- You can make anything you want using trash.
- That i-Movie is really easy when you know how to do it.

2. What do you wish you had spent more time on or done differently:

- I would have spent more time making the inside and outside of “The Generator.”
- I would have made more besides “The Generator” like: a 3-D satellite and a house.
- I would have spent more time on my independent i-Movie and try to figure out more.

3. What part of the project did you do your best work on:

- The circuit board on the inside of “The Generator” because I think Laker and I did a good job on making the circuit board and it had a lot of fractions included.
- My whole independent i-Movie because I figured out how to do most of the things by myself.

4. What was the most enjoyable part of this project:

- Everything! It was all super fun, especially the fractions, the building and the poster because it was all well made.
- Most of i-Movie was good except for the part where I accidentally used Thomas's account instead of mine.

5. What was the least enjoyable part of this project:

- Nothing really, everything was really enjoyable because nothing really went wrong except for the i-Movie part.

6. How could you change this project to make it better next time:

- Not put as much tape because there was a bunch of tape.
- Make it much bigger and more sturdy because one time Jaitin's hand accidentally slipped and put something out of place and then he put it back in place.
