

Makerspace Fraction Challenge

Project Self-Reflection

Student Name: Rex

Project Name: Fraction Island

- 1. What is the most important thing you learned in this project. The most important thing I learned is that all who help build the more the model shows all the creatures personality because my model has lots of my thinking that is put in this model.**
- 2. What do you wish you had spent more time on or done different. I wish I had spent more time planning my model before I started the build because we did lots of planning during the time to build the model. The poster was not in my planning and I wanted to do a handbook.**
- 3. What part of the project did you do your best work on. I worked on the planning of my model the most because the planning was like a field guide to me and like field guides. I like planning.**
- 4. What was the most enjoyable part of this project: I like the planning because the planning is creating the idea of all the things we might use in our build.**
- 5. What was the least enjoyable part of this project: The loud sound of talking was not so peaceful because all the voices were starting to get annoying.**
- 6. How could you change this project to make it better next time: Next time, I would make a more simple design of a big island in the middle of the sea because that took me a long time to build and it took me a while to figure out what I would do with it.**
