

# Makerspace Fraction Challenge

## Project Self-Reflection

**Student Name:** Willa

**Project Name:** Planet Fractions

- 1. What is the most important thing you learned in this project:** Fractions can be fun when you put them in games, models, and crafts. I learned that they are not just math, they also can be a craft, hobby, game, etc.
- 2. What do you wish you had spent more time on or done differently:** I should have taken my time on the asteroid crash safety pads so that they covered the whole top half of the spaceship. If I had just taken a little more time on it, that would have happened.
- 3. What part of the project did you do your best work on:** I did my best work on the game board, except the grassy details. I used slick stix. They are very slippery. The grassy details are a little bit too squiggly.
- 4. What was the most enjoyable part of this project:** Glitter, of course! Why? Because it's sparkly! Also the slick stix! They are really fun to slip around the paper!
- 5. What was the least enjoyable part of this project:** The end because I love creating. I also was very sad really close to the end because I knew we would have to stop soon.
- 6. How could you change this project to make it better next time:** Add more fractions because there are only 8 of them.
